

SORRENTO

- Decorative Stains For Concrete Surfaces.

Sorrento Decorative Stains for concrete, are water based, penetrating stains produced in a wide range of colours.

Developed to create semi translucent, shaded effects into concrete, for both interior and exterior use, Sorrento Stains provide tremendous scope for subtle and creative decoration to concrete surfaces, which can be equally appropriate for new construction or refurbishment.

Application Instructions:

1. Surfaces to be treated should be clean, free of contamination, with any existing sealer or curing membrane removed.
2. When supplied in concentrate form, liquid should be diluted between 1:3 and 1: 5 concentrate : de-ionised or distilled water, depending on degree of translucence sought. (For smaller projects, stains can be factory diluted, before dispatch).
3. Unpurified water should **NOT** be used.
4. Material can be applied by spray, sponge, roller or brush, although airless sprayer application is most economic.
5. A single coat will give a semi translucent, variegated effect, subsequent coats will reduce translucence, but a degree of variegation will remain.
6. It is recommended that treated surfaces receive an application of penetrating dirt and stain resistant sealer, such as our HRL Sicorol W Colourfresh or HRL Sicorol HO Colourtec Max.
7. Material concentrate is supplied in three units, which when diluted with de-ionised water at a ration of between 3 and 5 to 1, will typically cover a surface area of 75 - 100 sq. metres (large unit) 20 - 25 sq. metres (medium unit) and 2 - 3 sq. metres mini sample unit.
8. Availability is generally 4 – 7 days for stock colours and 10 – 14 days for non stock colours.
